

About Themify 2

Themify 2 is a modern, user-customisable Interface for the Rockbox operating system. Inspired by the incredibly diverse and creative iPod modding community, Themify is designed to let the user express themselves through colour schemes and customisation. Built around principles of user experience and quality, Themify 2 is not just an aesthetic coat of paint. Much work was done to achieve this, including adding features to Rockbox, designing a custom compact icon set for the iPod's screen, and crafting a performance-optimised font to let you view songs of any language on your iPod. Themify also features illustrations by the wonderful Thom Mack and comes with a beautifully designed User Manual by Kristine Lauron
